

SIDDHARTH PATEL

Senior DevOps & Cloud Infrastructure Engineer

Siddharthgopalpatel825@gmail.com | +91-7899449988 | New Delhi, India | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Senior DevOps & Cloud Infrastructure Engineer with 10+ years of experience building secure, scalable, and automated cloud infrastructure with embedded DevSecOps practices across the SDLC. Expert in Terraform-driven IaC (modules, state management, multi-environment), Kubernetes platform operations (EKS, self-managed, OpenShift — transferable to AKS), and CI/CD pipeline engineering with integrated security controls. Delivered enterprise platforms supporting 500+ servers and 15+ production microservices with 99.95% uptime. Reduced deployment failures by 95%, cloud costs by 35% (\$180K/year), and achieved <5-minute disaster recovery RTO. Strong alignment with CIS, NIST, and ISO 27001 compliance frameworks. Passionate about platform engineering, security automation, and building governed, self-healing cloud-native systems.

TECHNICAL SKILLS

Cloud Platforms	AWS (VPC, EKS, ALB, RDS Aurora, Lambda, Route53, IAM, Organizations, SCPs), Azure (AKS, Azure Defender, Azure DevOps), Multi-Cloud
Infrastructure as Code	Terraform (modules, state, workspaces, tfsec, Checkov, OPA/Conftest, Infracost), Ansible (AAP, roles, vault), CloudFormation
Containers & K8s	Kubernetes (EKS, self-managed, OpenShift, AKS), Docker, Helm Charts, Kustomize, Karpenter, Argo Rollouts
CI/CD & GitOps	Jenkins, ArgoCD, GitHub Actions, GitLab CI, Azure DevOps Pipelines, Cosign, Kyverno
Security & Compliance	DevSecOps, Trivy, Snyk, SonarQube, WAF, mTLS (Istio), Vault, CIS Benchmarks, NIST, ISO 27001, CSPM
Monitoring	Prometheus, Grafana, AlertManager, CloudWatch, EFK/ELK, Jaeger, X-Ray, Kubecost, App Dynamics
Networking	VPCs, Subnets, VPNs, Firewalls, Security Groups, NACLs, Istio Service Mesh, Calico, NetworkPolicies, ALB/NLB
Scripting	Python, Bash, PowerShell, Groovy (Jenkinsfile), HCL (Terraform), YAML
Practices	Platform Engineering, DevSecOps, GitOps, FinOps, SRE, ITIL, Zero-Trust, Canary Deployments, Policy-as-Code

PROFESSIONAL EXPERIENCE

Senior DevOps Engineer

June 2025 – Present

Ericsson Global India Private Limited | Noida, India

Led platform engineering across 10+ person cross-functional team — infrastructure automation, security-first CI/CD, and self-healing systems for enterprise telecom platform.

Infrastructure & Automation (Terraform)

- Built production 3-tier infrastructure (VPC, 3 AZs, ALB + WAF, EC2 ASG, Aurora Multi-AZ) with Terraform modules — handles 5,000 req/s, auto-scales 3→20 instances, <30s database failover
- Implemented IaC security scanning (tfsec + Checkov + OPA) in CI — zero misconfigurations reach production, cost impact on every PR via Infracost

- Architected multi-account AWS Landing Zone (15 accounts, 5 OUs) with Terraform — SCPs, OIDC federation, SSO; account provisioning: 2 weeks → 30 minutes

Kubernetes & Helm Deployments

- Operated K8s across 3 environments (self-managed, EKS, OpenShift) serving 15+ production microservices with standardized Helm chart-based deployments and environment-specific value overrides
- Managed workloads via Helm for repeatable, version-controlled delivery with automated rollbacks; Karpenter autoscaling with Spot optimization (60-70% node cost savings)

Security & Compliance (DevSecOps)

- Designed 18-stage DevSecOps pipeline (Jenkins + ArgoCD + Argo Rollouts) with 6 security layers — blast radius reduced 100% → 5% with Prometheus-driven canary auto-rollback in 2 min
- Supply chain security: Cosign image signing + Kyverno admission — only signed, scanned images run in production (SOC2 passed first attempt)
- Built serverless security remediation (EventBridge + Lambda) — auto-fixes CIS violations in 90 seconds, zero human intervention
- Enforced CIS/NIST-aligned policies: Pod Security Standards (restricted), NetworkPolicies (default-deny), mTLS (Istio), RBAC least-privilege

Monitoring & Incident Response

- Deployed Prometheus + Grafana + AlertManager + EFK with ServiceMonitor auto-discovery; structured alerting (P1→PagerDuty, P2→Slack, P3→Jira)
- Istio service mesh with Jaeger distributed tracing across 15 microservices — MTTR reduced from 2+ hours to under 5 minutes
- Multi-region DR (Route53 failover + Aurora Global + S3 CRR) — 3-minute RTO, <1-second RPO, quarterly automated validation

DevOps Engineer

Dec 2018 – June 2025

Ericsson Inc | Dallas, US

Infrastructure Automation & IaC

- Designed Terraform module library (VPC, EKS, RDS, IAM) for multi-region, multi-account deployments — CI/CD-driven plan/apply workflow with separate state per account
- Built enterprise OS patching automation (18-step lifecycle) on Ansible Automation Platform — 500+ RHEL servers/month, zero downtime, ServiceNow ITIL integration
- Developed 12 production-ready Ansible roles — independently testable, idempotent, and rerunnable

Cost Optimization & Security

- Reduced AWS spend 35% (\$180K/year): non-prod auto-stop, Karpenter consolidation, VPA rightsizing, VPC endpoints, Savings Plans
- Kubecost per-namespace cost visibility with chargeback reporting; tfsec + Checkov + OPA blocking non-compliant infra at PR stage
- IAM strategy: IRSA for pod-level access, OIDC federation, short-lived credentials, Access Analyzer auditing

System/Linux Administrator

Aug 2015 – Dec 2018

Ericsson Global India Private Limited | Bangalore, India

- Administered 100+ Linux servers (RHEL/CentOS) — patching, CIS hardening, performance tuning
- Automated operations with Bash/Python/Ansible — reduced manual SSH by 80%; managed Jenkins CI/CD for 20+ services
- Implemented monitoring (Nagios → Prometheus) and logging (ELK) — first cross-environment observability
- Managed backup strategies, disaster recovery, and incident response for production infrastructure

KEY ACHIEVEMENTS

95% deployment blast radius reduction	18-stage DevSecOps pipeline with Prometheus-driven canary auto-rollback
Zero IaC misconfigs in production	tfsec + Checkov + OPA integrated in Terraform CI pipeline
35% cost reduction (\$180K/year)	Automated FinOps: auto-stop, Karpenter, rightsizing, Savings Plans
3-minute disaster recovery RTO	Multi-region active-passive, Aurora Global, quarterly validated
500+ servers/month zero downtime	18-step automated patching, 7-dimension validation, ITIL
MTTR: 2+ hours → <5 minutes	Istio + Jaeger distributed tracing across 15 microservices
SOC2 passed first attempt	Landing Zone with SCPs, OIDC, centralized logging, automated compliance

KEY PROJECTS

Project	Highlights	Link
DevSecOps CI/CD Pipeline	18 stages, 6 security layers, canary + auto-rollback, GitOps (ArgoCD)	github.com/siddharthpatel1993/dcp_devsecops
Enterprise OS Patching	18-step lifecycle, ServiceNow ITIL, 7-dimension validation, AAP	gitlab.com/patelsiddharthnids993/ansible_os_automation
Full DevOps Platform	Terraform + Ansible + K8s + Prometheus stack from scratch	gitlab.com/patelsiddharthnids993/devopsproject

CERTIFICATIONS

- **CKA** — Certified Kubernetes Administrator (Linux Foundation)
- **CKAD** — Certified Kubernetes Application Developer (Linux Foundation)
- **AWS Solutions Architect – Associate** (Amazon Web Services)
- **Certified SAlFe® 5 DevOps Practitioner** (Scaled Agile)
- Delivery Champion — Kubernetes 2022
- MANA ADM Champion — DevSecOps 2023-2024

PROFESSIONAL CONTRIBUTIONS

- **Knowledge Sharing:** Internal tech talks on DevSecOps, K8s platform design, Terraform, and security automation
- **Mentoring:** Guided junior engineers through CKA certification and Ansible/Terraform adoption
- **Open Source:** 3 public repositories — CI/CD pipelines, Ansible automation, K8s infrastructure (GitHub + GitLab)
- **Continuous Learning:** Active in K8s/security/platform engineering communities; exploring Agentic AI in DevOps
